EDUCATION

Bachelor's degree in Information Technology

Da Nang University Of Technology

09/2019 - 06/2023

GPA: 3.52

TECHNICAL SKILL

Technologies:

- Nodejs
- Nestjs
- Reactjs
- Cypress
- UI Framework: Material UI, Bootstrap, TailWindCSS

SOFT SKILL

- Time management
- Problem solving
- Communication
- Quick learner
- Team work
- Using Github and Trello

TOOLS

- Resource Management:Git, GitHub, Gitlab
- Workflow Management: Slack, Trello
- Environment: Linux, Docker
- Design Tools: Photoshop, Illustrator, Figma
- Database: SQL, MySQL, PostgreSQL, MongoDB

NGUYEN LE HOANG LINH

BACKEND DEVELOPER

SUMMARY

Hi, I'm Linh, a web developer from Da Nang, Vietnam. Currently I am working on Nodejs and Angular. Besides, I am an easygoing person, ready to help people in my ability, capable of making public presentations. Because youth need many things to learn, I am willing to learn everything with 100% strength and intellect. Fluent in 2 languages English and Vietnamese.

EXPERIENCE

SAVVYCOM SOFTWARE	05/2024 - NOW
ENLAB SOFTWARE	05/2022 - 05/2024

GGT

Position: Fullstack Developer

Description: Developed a comprehensive full-stack product platform (MVP) consisting of a scalable NestJS REST API and a premium React-based admin console. The system orchestrates complex workflows including user KYC, vehicle catalog management, Omise payment integration, real-time communication, and automated notification services.

- Technologies: NestJS, PostgreSQL, TypeORM, Redis, Socket.IO, JWT, Prometheus. React 19, Vite, TanStack (Router/Query/Table), Tailwind v4, Zustand. AWS S3, Docker, GitLab CI/CD, Omise, Twilio, Firebase.
- API & Architecture: Designed and implemented modular REST APIs and domain-driven services (Auth, KYC, Payments, Chat) using NestJS and CQRS patterns.
- Data Modeling: Architected relational schemas with TypeORM and PostgreSQL, ensuring high transactional consistency and optimized query performance.
- Frontend Development: Engineered a modern Admin UI with React 19, Vite, and Tailwind CSS v4, focusing on complex data handling via the TanStack ecosystem.
- System Integration: Integrated 3rd-party services including AWS S3 (Media), Omise (Payments), Twilio/Firebase (Notifications), and Clerk (Authentication).
- Real-time & Monitoring: Built real-time messaging using Socket.io and implemented system observability via Prometheus metrics.
- Quality Assurance: Maintained code integrity through rigorous Unit/E2E testing (Jest) and managed deployments via GitLab CI/CD.

IMB

Position: Fullstack Developer

Description: A microservices-based product platform designed for the beauty and medical industry. The system features a federated GraphQL API composed of multiple NestJS microservices (IAM, Content, Media, Search) and a comprehensive React 18 admin console for managing hospitals, products, and content moderation (media monitoring, hashtags, forbidden words).

- Technologies: NestJS, React 18, TypeScript, GraphQL (Apollo Federation), PostgreSQL, Prisma, Elasticsearch, Kafka, Redis, Tailwind CSS, Shadcn UI, Docker.
- Architected and developed a scalable backend using NestJS microservices and Apollo Federation (GraphQL Gateway), handling domains like Identity Access Management (IAM), Hospitals, Products, and Content.
- Designed database schemas and managed data persistence using PostgreSQL alongside Prisma ORM for type-safe database access.
- Implemented a high-performance search service utilizing Elasticsearch and integrated Kafka for asynchronous, event-driven communication between microservices.
- Built a robust media processing pipeline using FFmpeg and Sharp for image/video handling, integrated with Redis for caching and job queues.
- Developed a fast, modern admin dashboard using React 18 and Vite, managing complex GraphQL data fetching and state with Apollo Client and TanStack Query.
- Constructed a cohesive UI system utilizing Shadcn UI (Radix) and Tailwind CSS, implementing strict form validation via React Hook Form and Zod.
- Maintained a unified Turbo monorepo environment, ensuring code quality through Jest testing, strict linting rules, and GitLab CI/CD pipelines via Docker.

ATE

Position: Backend Developer

Description: The App for a premium R/C hobby store in Hong Kong manages users, challenges, activities, vehicles, and the marketplace. It features user profile management, challenge creation, activity tracking, vehicle oversight, and marketplace management, enhancing customer experience by gamifying driving, tracking car history and maintenance, and connecting the app community.

- Technologies: Nest.js, Typescript, TypeORM, Redis, PostgreSQL
- Contribute setup source base using Nest.js.
- Collaborate with frontend developers and mobile developers to integrate APIs.
- Debug and troubleshoot UI issues.

EGP

Position: Fullstack Developer

Description: A modern and accessible platform for delivering educational content to a diverse audience

- Technologies: Nodejs, Nestjs, RabbitMQ, Redis, gRPC, Turbo Repo, PostgreSQL, Kong API gateway
- Apply DDD(Domain-Driven Design) pattern to project
- Implement IAM Service and authorization in Kong gateway
- Implementing gRPC communication between services
- Implementing RabbitMQ communication between services
- Use redis to store necessary data and improve performance

MEP

Position: Backend Developer, Frontend Developer

Description: Quick website builder designed to level up your link in bio. Showcase your products, launch your portfolio, and curate your brand.

- Technologies: Nodejs, Nestjs, Angular, PostgreSQL, Firebase, AWS S3, AWS SES, AWS Elastic Beanstalk
- Build CMS API and User Interface
- Implement API feature in application
- Integrate Authentication, authorization, and login with Google, Facebook
- Implement user forgot password
- Handle counting visitors on the website
- Implement Push notifications from CMS to people
